Coos Bay-North Bend Water
BOARD OF DIRECTORS' MESSAGE

"Providing a Reliable, Quality Service Meeting the Present and Future Needs of Our Communities"

Left to right:
Mr. J. Gregory Solarz, Member
Charles J. Sharps Ph.D., Chair
Ms. Melissa Cribbins, Vice-Chair
Mr. Robert Dillard, Secretary

Thank you for reviewing the 2020-2021 Coos Bay-North Bend Water Board's Annual Report. You will find information related to your utility's projects, finances, and water quality as well as an overview of the operations of the Coos Bay-North Bend Water Board and the services it provides. Additional information about your utility can be found on our website: www.cbnbh2o.com

America's infrastructure of roads, sewers, bridges, and water systems are at capacity and/or are wearing out. With our dedicated staff and General Manager's guidance and leadership, the Board has been able to anticipate potential shortfalls in our water system and has planned and scheduled Water Board operations, weeks, months and years ahead of time.

As members of your Water Board, we encourage your comments and suggestions. Please contact staff at the Water Board or ask to be connected to one of us at (541)267-3128. We respect your opinions and advice in operating your utility. For a closer look at your facilities, consider attending a board meeting or arranging for a tour.

BOARD OF DIRECTORS

J. Gregory Solarz, Member

Charles J. Sharps, Ph.D., Chair

Melissa Cribbins, Vice-Chair

Robert Dillard, Secretary

Projects and Equipment Included in Fiscal Year 2020-21 Budget

No.	Project Listing	Estimated Cost
1	Install 8" DI on South 4th Street 1,080', Retire 1080' 6" CI	$255,600
2	Install 2" PVC on Ferguson 245', Retire 245' 2" GI	38,400
3	Install 6" PVC on Brussels 340' plus 2" PVC on Clark and State 600', Retire 500' 6" CI and 440' 2" GI.	177,100
4	Tunnel Repair In-house Design	15,000
5	Steel Tank Coating Maintenance Program	274,000
6	Joe Ney Spillway Sealing	16,000
7	Merritt Dam Seismic Evaluation	52,000
8	Bright's Mill Pump Station Building and Appurtenances	82,900
9	Wisconsin Pump Station Replacement (Note:$242K budgeted in FY 20)	221,800
10	6th and I Street Pump Station Replace Pumps and Control Panels	46,500
11	Glasgow Pump Station	13,700
12	Ingersol Pump Station Mission Telemetry Upgrade	11,800
13	Shorewood Pump Station Mission Telemetry Upgrade	11,800
14	Oregon Pump Station/Libby Reservoir Mission Telemetry Upgrade	23,500
15	Well Meter Replacements	5,400
16	SCADA Master Plan	50,000
17	Turbidimeters	15,000
18	Parking Lot Paving	77,000
19	Phone System Server	25,000
20	Meter Replacement Program	133,000
21	Master Planning	100,000
	Total Project Costs	**$ 1,645,500**

No.	Equipment Listing	Estimated Cost
1	SUV	$35,000
2	Accessories and Safety Equipment	1,000
	Total Equipment Costs	**$36,000**
	Total Estimated Capital Expenditures	**$ 1,681,500**

Frequently Asked Questions and Utility Statistics
Fiscal Year 2020-2021

Q: How many customers does the Water Board serve?
A: As of June 30, 2021, our customer total is 13,324, which includes 10,302 customers inside the city limits of Coos Bay and North Bend and 3,022 customers outside the city limits. The total population served by the Water Board is approximately 34,500 within a service area of approximately 100 square miles.

Q: How much per month does the average residential customer spend for water?
A: The rates are different for customers inside the city limits than customers outside the city limits. The average monthly residential bill inside the city limits is $33.84 and outside the city limits is $48.22. The average residential customer uses 4,316 gallons of water monthly.

Q: What does it take to get the water from the treatment plant to the customer's tap?
A: More infrastructure than most people might imagine! When the water leaves the treatment plant, it goes into the distribution system which consists of 258 miles of various sizes of pipeline, approximately 5,494 control and hydrant valves within those pipelines, and approximately 1,195 fire hydrants. It takes 33 pump stations within the distribution system to get the water to customers at adequate pressure, plus 20 storage reservoirs located throughout the system.

Q: Where does the water come from that's treated by Pony Creek Water Treatment Plant?
A: There are two surface water reservoirs upstream of the treatment plant, Upper Pony Creek and Merritt Reservoirs. The larger, Upper Pony Creek Reservoir, can hold 2 billion gallons of water; and Merritt Reservoir can hold 125 million gallons. There is a third surface water storage area at Joe Ney Slough which can store 90 million gallons.

Water is pumped from Joe Ney through a pipeline into the Upper Pony Creek Reservoir when the need for more water arises.

Q: How much water is produced in a year for customers?
A: The total amount of water produced for customers this fiscal year was 1,284 million gallons of treated water and 172 million gallons of untreated water. The average daily demand for treated water was 3.50 million gallons and 0.471 million gallons for untreated water. The demand peaked at 6.090 million gallons per day for treated water in fiscal year 2020-21.

Q:Does all the water produced reach our customers?
A: Approximately 92.5% of the water produced at Pony Creek Water Treatment Plant reaches its ideal destination. Non-revenue water is the rest of the water that has been produced and is "lost" before it reaches the customer. Losses can be real losses such as leaks, water used for fire-fighting purposes, or apparent losses such as theft or metering inaccuracies. A team of Water Board staff meets on a regular basis to discuss potential improvements that can be made. The Water Board is in compliance with the latest Oregon rules and regulations, keeping non-revenue water loss below 10%.

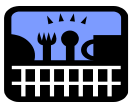
Q: How many water treatment plants are there?
A: There are two. The main treatment plant is Pony Creek Water Treatment Plant. It is located on Ocean Boulevard in Coos Bay and has a production capacity of 12 million gallons per day (MGD). The North Spit Water Treatment Plant is located on TransPacific Lane in North Bend and has a capacity of 1 MGD. If an emergency arises, the North Spit Plant can treat water from the dunes well system to supplement the needs of Water Board customers.

Q: How can I pay my water bill?
A: You can mail your water bill to P.O. Box 539, Coos Bay, OR 97420; at the Water Board Service Center; or by visiting us **online** at www.cbnbh2o.com

Water—Use it Wisely . . .

There are many effective ways to conserve water in and around your home. Saving water is more a matter of habits than high-tech gadgets. Here are some tips to get you started:

- Run your dishwasher and washing machine only when you have full loads.



- Use faucet aerators on all faucets. Like the water-saving showerhead, the aerators give you the same water pressure without using as much water.

- Turn off the tap when shaving, brushing your teeth, or washing your hands and face. You would be surprised how the gallons add up.

- Insulate hot water pipes for more immediate hot water at the faucet and for energy savings.

- Winterize outdoor spigots when temperatures dip below freezing to prevent pipes from leaking or bursting.

- Water your lawn in early morning or evening; you can lose as much as 30 percent of your water in evaporation from wind and heat when watering mid-day. Check automated sprinkler systems to make sure they are not over watering or watering unwanted areas. If you see soggy areas along buried irrigation lines or near sprinkler heads, you may have a problem.

- When the children want to cool off, use the sprinkler in an area where your lawn needs it the most.

- Position your sprinklers to avoid watering sidewalks, driveways, and other paved areas.

- Check your toilets for leaks: Put a little food coloring or toilet dye tabs (available at the Water Board) in your toilet tank. If, without flushing, the color begins to appear in the bowl, you have a leak that should be repaired immediately.

- If you do not have a low flow toilet, reduce the amount of water your toilet uses with each flush. Fill a plastic container with water and weight it down in the tank. It will take up the space normally filled with water and save water each time you flush.

- Check for leaks in pipes, hoses, faucets, fixtures and couplings. A faucet leaking one drop of water per second wastes 60 gallons of water per week, or almost 200 gallons in a month.

- Replace old fixtures with new low flow fixtures; saving water and eliminating leaks before they happen.

- Make sure you know where your master water shut-off valve is located. This could save gallons of water and damage to your home if a pipe were to burst.

- Check for household water leaks on a regular basis. Next time your house is empty for the weekend, check your water meter before you leave. Check it again when you return before anyone has a chance to use any water. If the meter has moved, you may have a leak.

- Monitor your water bill for unusually high use. Your bill and water meter are tools that can help you discover leaks.

2021 WATER QUALITY STATISTICS

One of the most important focuses of the Water Board is to provide high quality drinking water to our customers. Thousands of tests are performed annually as part of our quality control program and to insure compliance with state and federal regulations. The following results are reflective of 2021 reporting requirements.

Abbreviations and units used in trace concentration measurements issued by the Oregon Health Authority:

Waiver = non-vulnerability to contaminant
NTU = nephelometric turbidity unit
mg/L = milligrams per liter
pCi/L = picocuries per liter
MCL = maximum contaminant level
MFL = million fibers per liter (EPA)
ug/L = micrograms per liter
ND = not detected
CU = color units
< = less than
> = greater than
AL = action level
P/A = presence/absence
